

Client Project Management Portal

Business Analyst Project

Task 1: Requirement Gathering and Analysis

Project Overview:

A healthcare research company receives project requests from pharmaceutical clients through emails. Currently, project requirements are scattered across emails and meetings. Project managers manually track project status using Excel sheets. The organization wants to develop a web-based Client Project Management Portal to manage requirements, track project progress, improve communication, and provide better visibility to clients.

1. Stakeholders

Stakeholders	Role
Client	Provides project requirements and reviews project progress
Project Manager	Creates projects and manages project activities
Research Team	Works on healthcare research activities
Business Analyst	Collects requirements and prepares documentation
Management	Monitors project performance and business results

2. Business Problems

1. Requirements are scattered across emails and meetings.
2. Project status is manually maintained in Excel.
3. Clients do not have real-time visibility of project progress.
4. Misunderstanding of requirements causes project delays.
5. There is no centralized platform for communication and tracking.

3. Functional Requirements

ID	Requirement
FR01	Client should be able to login
FR02	Client can submit project requirements
FR03	Project Manager can create projects
FR04	Users can view project status
FR05	Users can track milestones
FR06	Users can upload documents
FR07	Users can download project files
FR08	System sends notifications
FR09	Client can approve milestones
FR010	Team members can update progress
FR011	Users can search projects
FR012	System general project reports

4. Non-Functional Requirements

Category	Requirement
Security	System should protect user data
Performance	System should load quickly
Availability	System should be available anytime
Scalability	System should support many projects
Usability	System should be easy to use
Audit Logs	System should track user activities
Mobile Compatibility	Portal should work on mobile devices
Backup	System should support data backup
