Agile & SDLC Questions

Prepared By:Nanthini P

1. Difference between Agile and Waterfall

Agile:

Agile is an iterative development approach where the project is completed in small cycles called sprints. It supports continuous feedback and changes.

Waterfall:

Waterfall is a sequential development approach where each phase is completed before moving to the next phase. Changes are difficult after starting.

2. What is a Sprint?

A Sprint is a fixed time period in Agile where the development team completes a specific set of tasks or requirements.

Example:

A 2-week sprint can be used to develop and test the login module.

3. What is a User Story?

A User Story is a simple requirement written from the user's perspective that explains what the user wants and why.

Example:

As a Client, I want to view project status so that I can monitor progress.

4.What is the role of Business Analyst in SDLC?

The Business Analyst acts as a bridge between stakeholders and the development team.

Responsibilities:

- Gather requirements
- Analyze business needs
- Prepare documents like BRD and FRD
- Communicate requirements to developers
- Support testing and validation

5.What is the purpose of Acceptance Criteria ?

- Acceptance Criteria defines the conditions that must be satisfied for a requirement to be considered completed successfully.
- It helps the team understand expected results and ensures the final product meets business needs.
